News

70 mini filter delivered to customer in chemical industry

10.09.2018 News

The aspiration to comply with customer demands is Infastaub's philosophy. According to that the Infastaub technicians developed a new model, internally called the „Minion“. Almost 70 filters of the new generation have already been delivered.

Customer requirements are constantly in motion. They are influenced by technical progress, economic conditions and social trends. But sometimes also by trivial reasons like for example restricted space conditions.

Infastaub already has a variety of filter series with different dimensions. The smallest diameter was DN 200. Too big for a customer in chemical industry.

The claim to comply with customer demands is Infastaub's philosophy. According to that the Infastaub technicians developed a new model, internally called the „Minion“. Furthermore the special demands on containment were decisive for the new product development. After filter cleaning, the recovered dust must sediment in the production process without getting mixed. A central dedusting unit for several exhaust points was therefore not an option.

The miniature filter unit has only a construction height of 51 cm with 17 cm diameter. It is equipped with only one filter bag.

Almost 70 filters of the new generation have already been delivered.
