Current issue

Silo filter INFA-JETRON AJP now in stainless steel

Motivated by the strong market resonance Infastaub has extended the filter series by a stainless steel design.

INFA-JETRON AJP 224 silo filter are fully automatic venting filters for de-dusting of exhaust air from silos, containers or machines. Filter units of this series are generally suitable for all needs, where a dust/air mixture continuously arises over a long period of time, e. g. for de-dusting of mechanical transport and manufacturing processes.

Motivated by the strong market resonance, Infastaub has extended the filter series by a new design. All parts in contact with the product and also the clean gas side can be manufactured in stainless steel. This qualifies the filter units in particular for the food, chemical, pharmaceutical and plastics industry. The filter elements are food safe according to EG 1935/2004 and EG 10/2011.

The pneumatic cleaning and high filtration performance of the AJP provide a very low residual dust content, also suitable for returning the exhaust air back to working places. The long life time and unique maintenance friendliness realise low costs for spare parts and maintenance.
