

Dear Reader,

shareholders and partners as well as manifold customers from the municipal and industrial sector trust in the Infastaub GmbH. Our company is characterised by economic thinking, combined with social responsibility and a cooperative teamwork with employees, customers and partners.

Basis of our successful company is besides technological performance, innovative strength, know-how and quality a responsible as well as ethically correct behaviour. These nonnegotiable parts of our value system will

characterise our acting also in future. At the same time we need to comply with increasing legal and social demands challenging the company.

That's why it is important to take responsibility: For a correct behaviour, a fair togetherness and the external effects of our actions. Our code of conduct determines therefore binding guidelines and creates a common ground. The contents are built on proven principles. The core objectives are integrity, honesty and respect. In particular we live these values

and pass them on.

We are all aware that the prospective success of Infastaub substantially depends on our reputation as regarded and trusted business partner. We keep on working on that.

Yours
Berthold Geppert

Infa-Inside

Training seminar „pneumatic conveyor technology“

The German Bulk Industry Association (DSIV) is hosting a seminar and training day about pneumatic conveyor technology on March

11th, 2020. The day offers a special and practical view to the enormous range of conveying bulk solids.

The topics include besides basics of pneumatic conveyor technology, compressed air production and conditioning and special conveyor systems also the topic dedusting technology. Bernhard Voß and Peter Richter, both Infastaub employees, explain in their presentation general mechanisms of dry

particle separation and different filter designs. In addition, they give advices for filter plant design. This also includes the characteristics of aspirating pneumatically filled containers.

A further focus of the Infastaub presentation are legal requirements as well as aspects of explosion protection.

Registration is only possible at the DSIV (www.dsiv.org).

We are at Instagram

Instagram is the new Facebook. At least when it concerns the younger target group. Even if not all of the Infastaub employees are „digital natives“, we address especially to this group when seeking new employees. Therefore we believe that it is reasonable to have a company account at Instagram.

We will fill our account with creative picture material and look behind the curtains of Infastaub and to our daily life. Our filter plants might not be as sexy as a high heel, but definitely „instagrammable“. So there won't be only insights of our Infastaub life but also of our filter plants.

Loyal member at the Frankfurt marathon

The oldest German city marathon and with regard to the number of finishers the second largest marathon of Germany is very popular among the participants, especially because of its spectacular and great finishing line. Along the red carpet the last round is in the „Frankfurt Festhalle“ and the runners are celebrated from the ranks after more than 40 km. It is just a single big running party. And since 10 years Klaus Schott, our head of sales and order management, takes part.

The last sunday in October is a fixed date in his calendar, in order to run 42,195 kilometers through Frankfurt. Since 2009 he makes his way on the marathon course in the Main metropolis. Now he has the privilege and honor to join the Frankfurt Marathon Club and can choose his personal and everlasting starting number. An honour reserved for only those who have reached the finish at least ten times. Klaus Schott has decided for number 1609 .

Make a small contribution to help

Each year we need 100 different brushes and sweepers - from hand brush to paintbrushes. They could be purchased cheaply from lower-cost producers. An alternative to these are brush products from a workshop for the blind.

In a workshop for the blind work - as the name already suggests - blind people. As it is well known, they have less chances on the „normal“ job market, find significantly harder a qualified job training, are limited deployable and often can perform less in a quantitative matter. But in these workshops, blind can get a job, even though this is only a secondbest solution. It would we

much better to include people with a handicap or blind people in the „normal“ job market. As commercial companies, the workshops need to place their products and services on the market profitably, because governmental support is becoming less and less.

Since decades already Infastaub sources the yearly need of brushes from approved workshops for blind people. „We can't change the conditions, but at least we can make a small contribution to help some persons concerned and secure their job“, says Klaus Feisel, Head of stock management .

Our trees are planted

They finally are placed. Our five spruce trees for the „Gustavsgarten“ in Bad Homburg. They replace big old Caucasian spruce trees, that needed to be cut down because they were destroyed by bark beetles.

On the occasion of our 50th anniversary we have donated the replacement of the spruce trees to the city. There is a good reason for it. Because Infastaub stands for environmental protection, dustfree air and relating thereto for health and well-being. That trees make a significant contribution to environmental protection is well-known. One hectare spruce forest filters about 30 tons of dust yearly. Crucial for a healthy climate; same as our filter plants. That's why we are taking all-around responsibility and also in future will provide an important contribution to our environment and the future of our planet.

Dustfree big bag filling

Granular, well or badly flowing, fine-grained and a great variety of bulk solids are filled via special systems into big bags. They are a widespread transport device for a large number of products and an important part of the production chain.

One of the core competences of „Moore Anlagenbau“ are big bag filling systems. These components are always adapted individually to the structural conditions of the producer. This can be at very small dimensions or - just like in our project - transportation of big bags filled with quartz sand via a roller conveyor.

When designing the plant, much attention was paid to low dust content. In this project, milled quartz sand, which has a very low bulk density of 0.90 - 1.60 kg/dm³, is filled into big bags. The lower the bulk density, the higher the developed dust when moving.

At the significant emission sources the dust is aspirated safely and efficiently by exhaust hoods above the filling station. Via a pipe system the dust is directed to a very efficient filter plant that is situated outside. An almost dustfree handling is ensured.

The cartridge filter with a filter surface area of 32 m² is designed for a volume flow of 2,400 m³/h. Noise emission of the fan is reduced by a silencer.

Solids 2020

Shaking, vibrating, sieving, crushing, filtering. For two days everything revolves in the Westfalenhalle Dortmund around bulk solids and the entire value chain of process technology for powder granulates and bulk solids. The „Solids“, formerly known as „easyfairs Schüttgut“, offers the setting for it. What began 10 years ago as small exhibition in Duisburg has evolved

in the past years into an international trade fair for bulk solid technology.

Infastaub also is among the 500 exhibitors - and this since the first issue in Duisburg. In hall 5, stand L20 we present solutions all around dedusting technology. Meet us these two days at the fair.

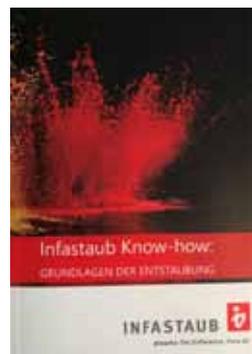

Dedusting for „fools“

A team of authors from Infastaub has created the lexicon „Infastaub Know-How: basic principles of dedusting“. It is a unique reference work about dedusting. Quasi „dedusting and filtering technology for fools“. The lexicon provides a comprehensive knowledge about

dedusting and filtering technology as well as the periphery.

Now the lexicon was published first-time in a bound version. In case of interest we are delighted to send a copy. A download version of the lexicon is available on our website.

What is actually doing ...?

Peter Richter Project management

Peter Richter is employed at Infastaub for almost a year. On April 1st, 2019, the 35-year-old mechanical engineer took over his position in the project management of Infastaub. Among his duties are further developments of filter plants but also support of the sales and technical department during project planning of plants.

What was the deciding factor for your job change to Infastaub?

I had applied for a vacancy as deputy manufacturing manager. During my interview we quite quickly found out that this position wouldn't be the right thing because of my experiences and trainings. However, it was foreseeable that Jürgen Tautz will retire in medium term. At that point of time Infastaub didn't search a successor, but as the Managing Director said, good

opportunities are rare. So it was a good fit for both Infastaub and me.

Can you tell us something about your professional career?

I already left my home at the age of 16 and started in Mainz my training to become a metalworker with specialisation on design technology. But soon only practical work wasn't sufficient for me. I wanted to understand the theory behind it and started my training to become a mechanical engineer. Afterwards I was employed for seven years at another manufacturer of filter plants before I started at Infastaub in 2019.

You were very young then when you left your parents' house.

Indeed – yes. But I had few alternatives. At that point of time the economic situation in my home region Dredsdien wasn't very good. Of course the early freedom had its charms, but the little, daily things when you are on your own that young, weren't always easy. I became independent very fast that way.

What do you like most about your job and Infastaub?

I always wanted to know how

things work. Are design and calculations correct? Do things work out in practice? Can my ideas be constructed?

At Infastaub we have a lot of free space in doing our jobs. I can achieve a lot when I convince my boss and colleagues about my ideas. Particularly I value the independent work and social interaction. My colleagues are very open-minded and everybody tries to help in case of problems. Teamwork is very good.

What do you do in your spare time?

I'm a passionate motorcycle and bicycle rider. I prefer to make tours through Germany with my bike; and that always on the country road.

Three words that describe you?

Happy, reliable, helpful.

If you could make a wish:

Basically I am happy with my life and my job. A little bit of more personal time would be nice.
