

With the first dust separators, cleaning was carried out manually, afterwards by vibration, then from purging air to development and establishment of pressurized air cleaning (jet-pulse cleaning). The transition from processes with purged air cleaning to jet-pulse cleaning has (because of the efficient separation of the periodic deposited filter cake) significantly contributed to increase the areas of application and higher air-to-cloth ratio.

Dust separator cleaning mechanisms
Online cleaning
Offline cleaning
Filter cleaning bag filter and pocket filter
Filter cleaning cartridge filter with vertical installation and pleated element filter
Filter cleaning with horizontal installation
Filter cleaning cassette filter
Cleanable filter with mechanical cleaning
Cleanable filter mit back-flush cleaning
Cleanable filter with jet-pulse cleaning
